

ISR & Target Acquisition Fleet - Shahed 123

When the Iranians roll out a new drone, there is usually much pomp and splendor. Unfortunately for OSINTeers worldwide, the Shahed 123 received no such fanfare. As such, information on this platform is limited. Powered by a single-cylinder, 2-stroke piston engine, this miniature drone is optimized for ISR missions. An example of this system was shot down over Turkish skies; according to Syrian officials, the system lost was not a helicopter, but rather a drone. Wreckage analysis conducted by Bellingcat confirmed it to be a Shahed 123. The system has a top speed of 175 Kmph and a weapons suite that matches the full spectrum of sensors that this drone can carry.

Weapon	Guidance	Maximum Range
Sadid-345	TV / EO Guided	Surface: 6 km • Land: 6 km
Sadid-345	Imaging Infrared (IIR) Guided	Surface: 6 km • Land: 6 km
Sadid-345	Laser (LST) Guided	Surface: 6 km • Land: 6 km

Sensor	Description
Generic TV Camera	2nd Generation EO/TV Surveillance Camera (8× Optical Magnification)
Detection Range	55.6 km
Generic IR Camera	2nd Generation Infrared Surveillance Camera
Detection Range	55.6 km
Laser Designator	Surface Target Laser Designator & Rangefinder (LTD/R)
Maximum Range	18.5 km
