

ISR & Target Acquisition Fleet - Shahed 125

Shahed-125 is an early-model tactical reconnaissance UAV (ISR) that once again does not get much in the way of attention in the public sphere. However, its fork-tailed tractor design with a pusher propeller is not unique to this system. It is shared across multiple platforms in both the Shahed and Mohajer families of drones. This is not to mention the Ababil, which has a similar design across most, if not all, publicly disclosed variants.

Iran is not the only country in the world to use this configuration; the American UAV 03 Ornen [RQ-7B Shadow 200] uses the same style of control systems and is capable of ISR. The Iranian Shahed 125 is additionally capable of mounting Hydra rockets.

Stat Sheet		Sensor Suite	
Type: Unmanned Aerial Vehicle (UAV)	Crew: 0	Type: TV Camera	Altitude Max: 0 m
Min Speed: 60 kt	Max Speed: 105 kt	Range Max: 55.6 km	Altitude Min: 0 m
Wingspan: 4.3 m	Height: 0.9 m	Range Min: 0 km	Generation: Visual, 2nd Generation TV Camera (1980s/1990s, AXX-1 TCS)
Length: 3.4 m	Max Payload: 0 kg		
Empty Weight: 84 kg	Max Weight: 170 kg		
Operator: IRGC Aerospace Force	Commissioned: 0		
Propulsion: 1x AR-741-1101	Weapons: HYDRA 70mm Rocket - (Mk 66 Rocket, M229 Warhead, M423/7 Fuze) Rocket Surface Max: 3.7 km. Land Max: 3.7 km.	Type: Infrared	Altitude Max: 0 m
		Range Max: 55.6 km	Altitude Min: 0 m
		Range Min: 0 km	Generation: Infrared, 2nd Generation Imaging (1980s/1990s, LANTIRN, Litening))
