

OWA/Kamikaze Drone-Shahed 131

Perhaps the most famous Iranian Drone ever made, the Shahed 131 is a “One-Way Attack” or OWA drone. Great at attacking fixed targets, its notoriety boils down to its simple and cheap design that has inspired US “knock-offs” like the even cheaper and simpler LUCAS drone as well as similar drones across the world. These systems gained widespread notoriety following their appearance over the skies of Ukraine.

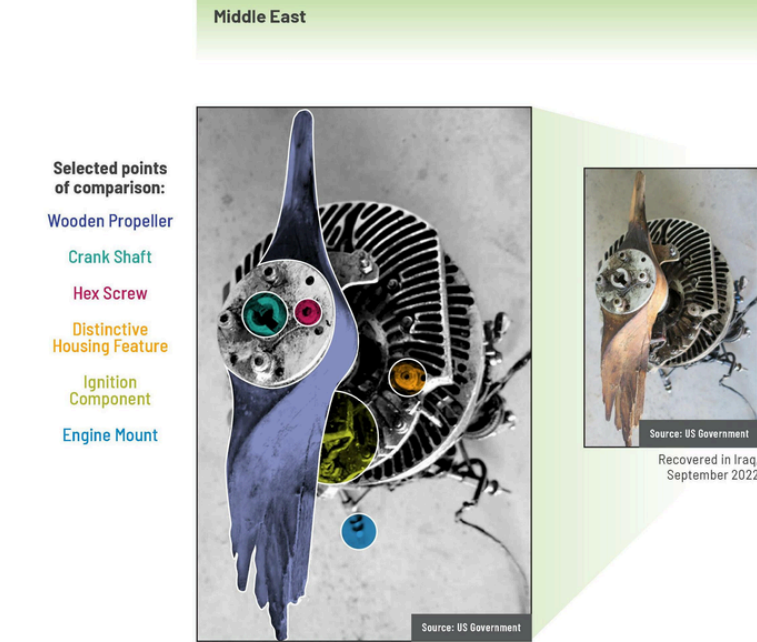

Shahed’s series of unmanned OWA drones carries a modest payload of just 10 - 30 Kgs. However, given that these drones are highly capable against fixed targets. Gulf states such as the UAE, Saudi Arabia, Bahrain, and Qatar have come under sustained drone attacks by the IRGC. With each 30Kg warhead, the details of the damage are as follows.

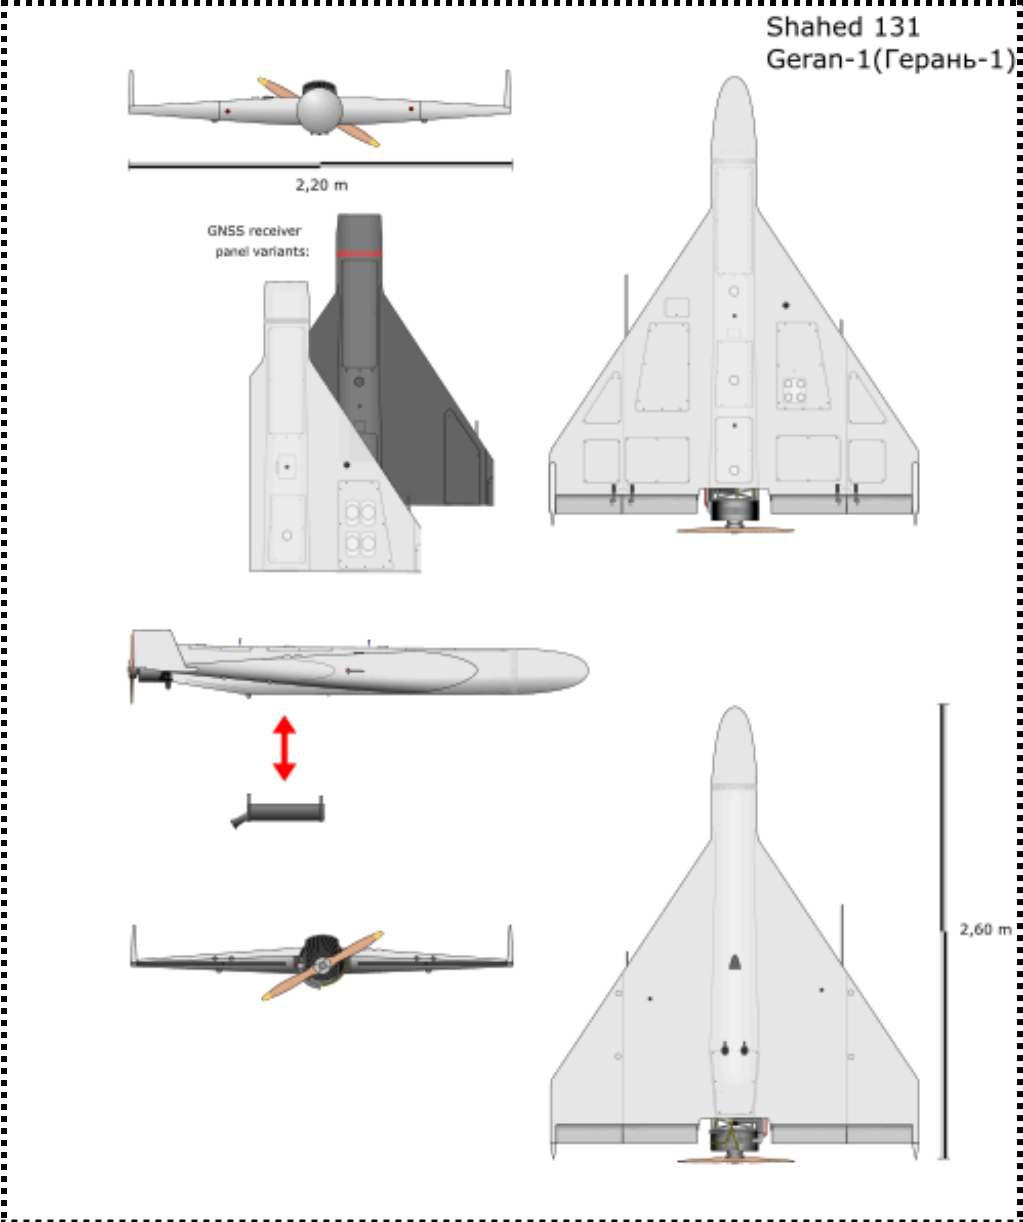

Considering each warhead contains 30 kg of RDX, the UN blast damage calculator estimates the following:

Tissue Damage		Damage to Brick Structures	
Fatal Distance	7.38	Houses completely demolished	3.44
Lung Damage	11.7	Houses badly damaged, beyond repair, require demolition	5.09
Eardrum Rupture	30.08	Houses rendered uninhabitable, can be repaired with extensive work	8.89
		Houses rendered uninhabitable, can be repaired reasonably quickly	15.27
		Houses require repairs, serious inconvenience but remain habitable	30.54

The Shahed 131 uses A smaller MDR 208 variant motor, which provides a very significant maximum effective range of at least 700–900 km. Furthermore, it is reported that each system costs \$27,000. This affordability has made it the poster-child for UAV Proliferation

The Shahed 131 and 136 are often confused because of their similar shape but the latter is significantly larger.

Name	Shahed-131
In Service	2019–Present
Range	700–1,000 km
Length	2.6 m
Wingspan	2.2 m
Launch Weight	135 kg
Warhead / Payload	10–20 kg
