

ISR & Target Acquisition Fleet - Shahed 147

Characteristic	Specification
Crew	Unmanned
Wingspan	26 m [2] [4]
Configuration	Twin-boom [2]
Propulsion	Turboprop engine [2] [4]
Service ceiling	60,000 ft [2] [4]

According to a news video published by the [Young Journalist’s Club](#), this drone has been enabled with AI features for espionage and has been specially designed for ISR activities. Visual Identification of the TV and IR camera confirms it to be of the third generation, which is a great improvement over previous variants.

Unveiled in 2023, this HALE UAV can be seen as Iran’s answer to the RQ-4 Global Hawk - itself a capable ISR and strike platform. It is one of the relatively newer Iranian drones equipped with an SAR radar and can carry a capable ISR Suite. In fact, it is much touted for its qualities of a relatively high service ceiling and range. Despite the comparison, the RQ-4 Global Hawk remains the more potent platform. This is the second platform after the Gaza or Shahed 149 drone to have a turboprop engine, enabling greater range and thus endurance.

<u>Sensors / EW:</u>
Generic TV Camera - (3rd Gen, Surveillance) Visual Visual, Surveillance TV Camera Max Range: 55.6 km
Generic IR Camera - (3rd Gen, Surveillance) Infrared Infrared, Surveillance Camera Max Range: 55.6 km
Generic Laser Designator - (Surface Only) Laser Designator Laser Target Designator & Ranger (LTD/R) Max Range: 18.5 km

Very little is known about this drone. In official sources, there are but a few instances of this drone being shown to the public. There seems to be little in the way of stealth-conscious shaping. In fact, the twin-boom tail and unsheilded prop act as flashpoints for radar.

While the [video](#) by The Young Journalist’s Club of Iran spoke of armed capabilities, it was mostly concentrated on the Gaza Drone rather than the Shahed 147. The video drew repeated comparisons with the Global Hawk, accurately stating that the drone is capable of evading many air defences simply because of how high it can fly.
